Tran Thanh Lam

District 8, HoChiMinh • https://lamtranportfolio.vercel.app/ • s4038329@rmit.edu.vn • 0376421569

Education

RMIT University (Royal Melbourne Institute of Technology) — HoChiMinh,Vietnam
Bachelor of Engineering (Software Engineering) (Honours). GPA: 3.6/4 — *10/2023 - Present*

Leadership & Activities

Personal Project, Lending School Equipment Full Stack Website
Personal Website — *June 2025 – August 2025*

- **Developed** both the frontend (React.js, TailwindCSS) and backend (TypeScript, Express, Neon) using a PERN-style full-stack architecture, implementing clean and efficient RESTful APIs.
- **Applied** Headless UI–based design architecture on the frontend to enhance code modularity and scalability, reducing future maintenance overhead.
- **Implemented** real-time forum discussion using WebSockets, enabling instant message updates without page refresh.
- **Implemented** secure authentication using bcryptjs for password hashing and cookie-based tokens for session management, **ensuring commercial-grade security standards.**
- **Implemented** responsive UI/UX supporting both laptop, tablet and mobile screens for a consistent user experience across devices.

Project Member, Events and Attendees Management Full Stack Website – RMIT University
"Full Stack Web Development" course — *March 2025 – May 2025*

- **Contributed** to building a React-based frontend for a CMS system, implementing authentication, role-based authorization (RBAC), dynamic routing, and a modular component structure to improve scalability and maintainability.
- **Implemented** responsive UI/UX for both desktop and mobile to enhance user accessibility and consistency.
- **Built and contributed** to a modular RESTful API using Express.js, integrating middleware for authentication, error handling, and PostgreSQL (Neon) database operations to enable efficient data exchange and CRUD functionality.
- **Applied Agile** methodology with structured sprint planning, task breakdown, and weekly reviews to streamline team collaboration and ensure timely delivery of project milestones.

Personal Project, Campus Companion Android Application – RMIT University
"Mobile Application Development" course — *July 2025 – August 2025*

- Built an Android application to enhance student campus experience, integrating features such as club/event discovery, food ordering, study room booking, and location-based recommendations.
- **Applied** MVVM design pattern to improve code modularity, maintainability, and long-term scalability.
- **Implemented** backend services using Firebase Authentication, Firebase Realtime Database, and Cloudinary for image storage.
- **Integrated** Google Maps API and real-time location services to provide accurate navigation and personalized recommendations.
- **Utilized** device hardware features such as camera access for image capture and uploads.
- **Gained hands-on experience** in Android app development, UI/UX design, API integration, and real-time location services.

Project Lead, Rental Agreement Application – RMIT University

"Further Programming Course" course *Nov 2024 – Jan 2025*

- **Led** a team of 3 in developing a **Java-based desktop application** with a cross-platform **JavaFX GUI**, supporting both Windows and macOS.
- Applied **MVC architecture** and integrated PostgreSQL for robust data management and scalability.
- Produced clear and detailed **technical documentation**, streamlining future enhancements and reducing onboarding time for new developers.

Skills & Interests

- **Technical**: C, C++, Java, HTML, CSS, React, Tailwind CSS, JavaScript, TypeScript, Kotlin, JavaFX, Express.js, Node.js
- **Language**: Vietnamese, English
- **Interests**: OOP principles, Design Patterns, AI integration, Algorithm
